

NC Poll Results

CONFIDENTIAL - DATA NOT FOR RELEASE

Methodology

Poll number: pr2009

Interview Dates: May 9-12, 2020

Sample Population: 588 likely voters in North Carolina.

Sample Selection: Scientific online poll - stratified sample of panel respondents.

Weighting Parameters: The sample was weighted based on the U.S. Census Bureau's Voting and Registration Supplement to the Current Population Survey for registered voters in North Carolina based on age, gender, race, educational attainment. After weighting, respondents were filtered on their likelihood to vote in the upcoming November 2020 elections.

This topline provides weighted percentages, as well as the unweighted N-size for the total sample. Due to the effects of weighting and rounding, figures may or may not add up to 100%. The standard deviation of the weights was: 0.1593609. The maximum weight was: 1.4337834. The minimum weight was: 0.6589204. 95% of the weights were between 0.7608404, 1.3718341.

Margin of Error: The 95% credibility interval for this survey is +/- 4.1%, which includes the square root of the design effect (DEFT): 1.0127114.

NC10...As you may know, research shows that oil and gas companies' pollution caused climate change, and the oil and gas industry lied to the public for decades about the impact of their pollution on the climate instead of taking steps to stop it. Cities and states are already spending money and developing innovative projects to protect themselves from the impacts of climate change, such as upgrading flood control systems, fortifying roads, bridges, and sewer infrastructure, and protecting drinking water. Some say that because of this, oil and gas companies should pay at least some of the costs related to protecting communities from the impacts of climate change, including upgrading infrastructure in those communities. Others say that oil and gas companies have done nothing wrong and shouldn't be held financially liable for the effects of climate change, nor should they pay for individual community projects to upgrade infrastructure. What do you think? Do you think oil and gas companies should pay for all, some, or none of the costs related to protecting communities from the impacts of climate change in the United States?

idvars	Oil and gas companies should pay for all of the costs of protecting communities from the impacts of climate change in the United States.	Oil and gas companies should pay for some of the costs of protecting communities from the impacts of climate change in the United States.	Oil and gas companies should pay for none of the costs of protecting communities from the impacts of climate change in the United States.	Not sure	N

NC16Ax1...How convincing do you find each of the following statements as reasons to hold oil and gas companies accountable for climate change and its associated impacts? - As early as the 1960s, oil and gas executives knew that their products caused climate change. But instead of adjusting course and leading the change to clean energy, oil and gas executives launched a multi-billion dollar, decades-long disinformation campaign to lie to the public, lawmakers, and the media about the impacts their products had on the climate, while they continued to pollute. Now, they're trying to avoid accountability. Big Oil knew, Big Oil lied, and Big Oil should pay. [HALF SAMPLE, UNWEIGHTED N = 308]

NC16Ax5...How convincing do you find each of the following statements as reasons to hold oil and gas companies accountable for climate change and its associated impacts? - North Carolina schools are drastically underfunded, and thanks to climate change, those budgets are going to get even tighter. Schools across the state will need to make major investments to update and modernize in the face of extreme temperatures and turbocharged storms. Oil and gas executives knew their products caused climate change, and lied to us for decades. They should be the ones to foot the bill—not our kids. [HALF SAMPLE, UNWEIGHTED N = 308]

NC16Bx1...How convincing do you find each of the following statements as reasons to hold oil and gas companies accountable for climate change and its associated impacts? - As early as the 1960s, corporate polluters knew that their products caused climate change. But instead of adjusting course and leading the change to clean energy, corporate polluters launched a multi-billion dollar, decades-long disinformation campaign to lie to the public, lawmakers, and the media about the impacts their products had on the climate, while they continued to pollute. Now, they're trying to avoid accountability. Big Oil knew, Big Oil lied, and Big Oil should pay. [HALF SAMPLE, UNWEIGHTED N = 280]

NC16Bx3...How convincing do you find each of the following statements as reasons to hold oil and gas companies accountable for climate change and its associated impacts? - It's a tale as old as time: corporate executives put our families and communities in danger so they could rake in the profits. Corporate polluters have known for decades that their products caused climate change, but spent millions lying to the public and elected officials. Now, just like we took Big Tobacco and Big Pharma to court to make them pay, it's time we took a stand and held Big Oil accountable. [HALF SAMPLE, UNWEIGHTED N = 280]
